WPI; 2002-750636/81.

Antiallergic compositions containing an anti-histamine, a histamine synthesis inhibitor, and optionally an allergen or nucleic acid coding for the allergen.

Claim 14; Page 11; 32pp; French.

The invention relates to antiallergic compositions containing an anti-histamine, a histamine synthesis inhibitor, and optionally an allergen or isolated nucleic acid molecule that has at least one polymucleotide sequence coding for the allergen, together with a pharmaceutical carrier. The pharmaceutical composition of the invention is useful as a non-specific antiallergic treatment, and also useful in the treatment of allergic hypersensitivity, allergic asthma, allergic rhinitis, and allergic and acopical eczema. This sequence represents a peptide of a cysteine protease epitope region relating to the antiallergic

The present invention relates to house dust mite (Dermatophagoides pteronyssinus) Der pl antigen peptides containing human CD8 cell epitopes. The peptides of the invention are useful in the treatment of human or animal patients, particularly to raise an immune response to the allergies to the major house dust mite antigen, and to monitor disease activity in atopic patients. ABULIO78-ABULI146 represent house dust mite of patients and prevention of ber pl antigen peptides containing CD8+ T-cell epitopes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New peptide fragments of the Der pl antigen of the house dust mite
Dermatophagoides ptéronyssinus contain a human CD8+ T cell epitope ar
are useful to treat and prevent allergy to the major house dust mite
                                                                                                                                                    House dust mite, Der pl antigen, human CD8 cell epitope, allergy, immune response, atopic patient, CD8+ T-cell epitope, antiallergic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               House dust mite; Der pl antigen; human CD8 cell epitope; allergy; immune response; atopic patient; CD8+ T-cell epitope; antiallergic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                House dust mite Der pl antigen peptide #31.
                                                                                                                   House dust mite Der pl antigen peptide #45.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Mismatches

                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                               The present invention relates to house dust mite (Dermatophagoides pteromyssinus) Der pl antigen peptides containing human CD8 cell epitopes. The peptides of the invention are useful in the treatment of human or animal patients, particularly to raise an immune response to the Der pl antigen. They are useful in the treatment and prevention of allergies to the major house dust mite antigen, and to monitor disease activity in atopic patients. ABULIO78-ABULI146 represent house dust mite Der pl antigen peptides containing CD8+ T-cell epitopes

ö
1,2-xylosyltransferase, where the enzyme adds a beta 1,2-linked xylose to the beta -linked mannose on the N-linked oligosaccharides of storage glycoproteins. Xylose units on N-linked oligosaccharides may play a critical role in allergenicity of plant derived glycoproteins and may also be important in regulating the structure of the oligosaccharide chains and the targeting of these proteins. Purification of a xylosyltransferase is useful in order to study its properties and specificities in the absence of interfering activities and possible inhibitors. The antibody can be used to determine the localization of the xylosyltransferase in suspension culture soybean cells and the distribution and level of the enzyme in plants as well as its levels at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to Arabidopsis thaliana beta 1,2-xylosyltransferase plant protein and its CDNA molecule. Beta 1,2-xylosyltransferase protein mucleic acid (PNA) molecule is useful for producing transgenic plants and plant cells with increased efficiency in producing glycoproteins. The invention also relates to a method for producing recombinant human glycoproteins which is suitable for medical use. Beta 1,2-xylosyltransferase DNA is useful for immobilisation on DNA microarrays, e.g. for finding homologous sequences or for expression studies in plants or non-vertebrate animals. The invention is also useful for inactivation, suppression or over expression and production of beta 1,2-xylosyltransferase. The present sequence is soybean peptide 3 which is used for analysing Arabidopsis thaliana beta 1,2-xylosyltransferase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               beta 1,2-xylosyltransferase, useful for and plant cells with increased efficiency in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Beta 1,2-xylosyltransferase; transgenic plant; medicament; glycoprotein;

antipsoriatic, antiinflammatory, vasotropic and respiratory activities, and can be used in gene therapy. The composition and methods are useful in managing, diagnosing, preventing or treating hyperproliferative cell diseases (i.e. metastatic cancer) or non-cancer hyperproliferative cell diseases or disorders, such as asthma, psoriasis, inflammatory bowel disease, smooth muscle restenosis, endothelial restenosis, Crohn's disease or chronic obstructive pulmonary disease. They may also be used for monitoring the efficacy of therapy for cancer in a patient known to or suspected to have cancer, and in screening for anti-cancer drugs. The present sequence is used in the exemplification of the present invention.

The present invention describes a method for treating cancer or a noncomprises administering to the patient a therapeutic amount of an Ephh2 antibody (1) that is an EphA2 agonistic antibody, an EphA2 cancer cell comprises administering to the patient a therapeutic amount of an EphA2 cancer cell antibody that binds EphA2 agonistic antibody, an EphA2 cancer cell cartibody that binds EphA2 agonistic antibody, an EphA2 cancer cell antibody that binds EphA2 agonistic oromprising a therapeutic antibody that binds EphA2 with a K-off of less than 3 x 10-3 s-1. Also described: (1) a pharmaceutical composition comprising a therapeutic amount of (1) and a pharmaceutical carrier; (2) a cell line that produces (1); (3) a hybridoma deposited with the ATCC accession number PTA-4572, PTA-4573, or PTA-4573, or PTA-4573, or PTA-4573, or PTA-4573, or PTA-4573, or PTA-4573, or PTA-4573, or PTA-4573, or DTA-4573,                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Treating cancer or a non-cancer hyperproliferative cell disease (e.g. asthma, psoriasis, inflammatory bowel disease or restenosis) in a patient comprises administering to the patient a therapeutic amount of an EphA2 antibody.
                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        cancer, hyperproliferative cell disease; EphA2 antibody; EphA2 agonistic antibody; cytostatic; antiasthmatic; antipsoriatic; antiflammatory; vasotropic; respiratory; gene therapy; metastatic cancer; asthma; psoriasis; inflammatory bowel disease; smooth muscle restenosis; endothelial restenosis; Crohn's disease;

The invention may be useful for the production of compounds with a virucide activity or the development of a vaccine. The polypeptide or its fragments may be useful as a therapeutic agent. It is also useful for the manufacture of a medicament for treating or preventing an infection with the pathogenic virus. The present sequence is that of a human papillomavirus (HPV) epitope peptide of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New polypeptide encoded by an alternative reading frame of a pathogenic virus comprising an antigenic determinant, useful for treating or preventing an infection with the pathogenic virus.

This invention relates to a novel polypeptide encoded by an alternative reading frame of a pathogenic virus, where the polypeptide starts with a methionine amino acid residue, which comprises an antiganic determinant and more than 7 amino acid residues. The invention may be useful for the production of compounds with a virucide activity or the development of a vaccine. The polypeptide or its fragments may be useful as a therapeutic agent. It is also useful for the manufacture of a medicament for treating or preventing an infection with the pathogenic virus. The present sequence is that of a human papillomavirus (HPV) epitope peptide of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New polypeptide encoded by an alternative reading frame of a pathogenic virus comprising an antigenic determinant, useful for treating or preventing an infection with the pathogenic virus.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This invention relates to a novel polypeptide encoded by an alternative reading frame of a pathogenic virus, where the polypeptide starts with a methionine amino acid residue, which comprises an antigenic determinant and more than 7 amino acid residues. The invention may be useful for the production of compounds with a virucide activity or the development of a vaccine. The polypeptide or its fragments may be useful as a therapeutic agent. It is also useful for the manufacture of a medicament for treating or preventing an infection with the pathogenic virus. The present sequence is that of a human papillomavirus (HPV) epitope peptide of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New polypeptide encoded by an alternative reading frame of a pathogenic virus comprising an antigenic determinant, useful for treating or preventing an infection with the pathogenic virus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

                                                                                                                                                                  This invention relates to a novel polypeptide encoded by an alternative reading frame of a pathogenic virus, where the polypeptide starts with a methionine amino acid residue, which comprises an antigachic determinant and more than 7 amino acid residues. The invention may be useful for the production of compounds with a virucide activity or the development of a vaccine. The polypeptide or its fragments may be useful as a therapeutic agent. It is also useful for the manufacture of a medicament for treating or preventing an infection with the pathogenic virus. The present
                                                                                         New polypeptide encoded by an alternative reading frame of a pathogenic virus comprising an antigenic determinant, useful for treating or preventing an infection with the pathogenic virus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New polypeptide encoded by an alternative reading frame of a pathogenic virus comprising an antigenic determinant, useful for treating or

```

This invention relates to a novel polypeptide encoded by an alternative reading frame of a pathogenic virus, where the polypeptide starts with a

```
ö
methionine amino acid residue, which comprises an antigenic determinant and more than 7 amino acid residues. The invention may be useful for the production of compounds with a virucide activity or the development of a vaccine. The polypeptide or its fragments may be useful as a therapeutic apent. It is also useful for the manufacture of a medicament for treating or preventing an infection with the pathogenic virus. The present sequence is that of a human papillomavirus (HPV) epitope peptide of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This invention describes novel antibodies that immunospecifically bind to by Lymphocyte Stimulator (BLyS) polypeptides. BLyG is a member of the tumour necrosis factor (TMP) super family and induces B cell proliferation and differentiation. The antibodies of the invention have cytostatic, immunosuppressive, immunostimulant, immunosdulatory, antirheumatic and antiAIDS activity and can be used in vaccines to inhibit the expression and activity of BLyS. The antibodies bind to BLyS and so when be used to detect and quantitate the presence of BLyS in biological samples and may be used in this way to diagnose disease associated with aberrant expression of BLyS. They may also be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Antibodies against B Lymphocyte Stimulating polypeptides, useful for the diagnosis and treatment of cancers and immune disorders.
                                                                                                                                                                                                                                                              Gaps

Specifically, it refers to single chain antibody molecules (scFvs) derived, preferably, from the variable heavy CDR3 region that:immunospecifically bind to a polypeptide, or fragment thereof, of either human, murine, rat or monkey BLyS. The present invention refers to the use of such antibodies in various methods for the detection, diagnosis and prognosis of diseases related to the aberrant expression or inappropriate function of BLyS or its receptor. As such various are useful for identifying immune disorders including myasthenia gravis and multiple sclerosis, inflammatory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Novel antibody that immunospecifically binds to a B lymphocyte stimulator (BLys), useful for detecting and treating diseases or disorders e.g. rheumatoid arthritis, asthma and leukemia.
                                                                                                of

The genes and proteins are useful for eliciting a humoral or cellular immune response. The genes are useful as probes and primers for the amplification and/or detection of genes, mRNAs or their fragments, as reagents for the diagnosis and/or prognosis of cancer, as coding sequences capable of directing the expression of the protein, as tools for modulating or inhibiting the expression of genes and/or translation of transcripts, and as therapeutic agents. The proteins and peptides are useful as therapeutic, prognostic and diagnostic reagents for cancer. The present sequence is a human leukocyte antigen (HLA) peptide, used in an example
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New composition comprising a substance that modulates the structure of proteins and polynucleotides, useful for therapeutic, prognostic and diagnostic reagents for eliciting cellular or humoral immune response in
lymphoma. Accordingly, they can be described as exhibiting various activities such as antirheumatic, antiarthritic, neuroprotective, antiaflammatory, antiasthmatic, antiallergic and cytostatic. This peptide sequence is a single chain antibody variable heavy CDR3 peptide
                                                                                                                                                                     Gaps
                                                                                                                                                                    ;
                                                                                                                                                                                                                                                                                                                                                                                                                                               Human; cytostatic; vaccine; cancer; immune response; HLA;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                           Sequence 5, Application US/09748578

Patent No. US20010016344A1

GENERAL INFORMATION:
APPLICANT: Blbein, Alan D.
APPLICANT: Bannon, Gary A.
TITLE OF INVENTION: Purified (1,2-Xylosyltransferase and Uses Thereof CURRENT APPLICATION NUMBER: US/09/748,578

CURRENT APPLICATION NUMBER: US/09/748,578

CURRENT FILING DATE: 2000-12-22

PRIOR FILING DATE: 1998-12-08

NUMBER OF SEQ ID NOS: 7

SEQ ID NOS: 7
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          RESULT 4

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            à
                                                                                                                                                                                                                                                                                    Sequence 204, Application US/08836075A
Patent No. 6180768
GENERAL INFORMATION:
APPLICANT: MAERTENS, GEERT
APPLICANT: STUYVER, LIEVEN
TITLE OF INVENTION: NEW SEQUENCES OF HEPATITIS C VIRUS GENOTYPES
TITLE OF INVENTION: AND THEIR USE AS PROPHYLACTIC, THERAPEUTIC AND DIAGNOSTIC
TITLE OF INVENTION: AGENTS
NUMBER OF SEQUENCES: 207
CORRESPONDENCE ADDRESS:
                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

Patent No. 5691134

GENERAL INFORMATION:
APPLICANT: Kilpatrick, David R.
TITLE OF INVENTION: POLIOVIRUS SPECIFIC PRIMERS AND METHODS
TITLE OF INVENTION: 0F DETECTION UTLIZING THE SAME
NUMBER OF SEQUENCES: 35
CORRESPONDENCE ADDRESS:
ADDRESSES: NEEDLE & ROSENBERG, P.C.
STREET: Suite 1200, The Candler Building, 127
STREET: Peachtree Street, NE
Score 22; DB 1; Length 7; Pred. No. 4.1e+05; 1; Mismatches 1; Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1; Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Score 22; DB 1; Length 7; Pred. "Isolation, primary structure and synthesis of two neuropeptides fro
Leucophaea maderae: members of a new family of Cephalomyotropins.";
Comp. Biochem. Physiol. 84C:205-211(1986).
-!-FUNCTION: This cephalomyotropic peptide stimulates contractile
activity of cockroach protodeum (hindut).
-!- SUBCELLUIAR LOCATION: Secreted.
Amidation, Direct protein sequencing; Neuropeptide.
B Glycine amide.

Antiallergic compositions containing an anti-histamine, a histamine synthesis inhibitor, and optionally an allergen or nucleic acid coding for the allergen.

Claim 14; Page 11; 32pp; French.

The invention relates to antiallergic compositions containing an antihistamine, a histamine synthesis inhibitor, and optionally an allergen or hisolated nucleic acid molecule that has at least one polynucleotide sequence coding for the allergen, together with a pharmaceutical carrier. The pharmaceutical composition of the invention is useful as a nonspecific antiallergic treatment, and also useful in the treatment of allergic hypersensitivity, allergic asthma, allergic ratinitis, and allergic asthma, allergic ratinitis, and allergic asthma, allergic asthma allergic asthma the protease epitope region relating to the antiallergic of a

The present invention relates to a method of detecting Cryptosporidium in biological and environmental samples, and of diagnosing surptosporidiosa. This involves obtaining a sample and contacting it with Cryptosporidium GP900, FG6 or cryptosporian antigen, antibody, DNA or RNA, or its variant, mutant or fragment. The method is also useful for detecting and identifying individual Cryptosporidium isolates based on the genetic characteristics, and for diagnosis of prior or concurrent Cryptosporidium infection. The present sequence is a C. parvum peptide sequence used in the exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Detecting Cryptosporidium in biological and environmental samples and diagnosis of cryptosporidiosis involves, contacting the sample with Cryptosporidium GP900, P68 or cryptopain antigen, antibody, DNA or RNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Primer; amplify; polymerase chain reaction; PCR; Haemonchus contortus; cysteine proteinase; DM.2; DM.3; DM.4; human; DM.4a; DM.5; antigen; vaccine; helminth; parasite; DM.1; ruminant; gastro-intestinal tract.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention relates to an antiallergic pharmaceutical composition (1) comprising a pharmaceutical carrier containing an active agent combination of at least two of: an allerger, an antihistenaine; and a histamine synthesis inhibitor. (1) is used for treating or preventing allergic hypersensitivity reactions, especially allergic asthma, allergic thinties or allergic cacama, in bablies, children or adults. The present sequence is a peptide fragment (epitope) of cysteine protease from Dermatophagoides pteronyssinus, which was used as an allergen in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Antiallergic composition, useful for preventing and treating e.g. asthma, rhinitis or eczema, containing at least two of allergen, antihistamine and histamine synthesis inhibitor.
                                                                                                                 Gaps

Composition comprising human leukocyte antigen binding peptide comprises isolated, prepared epitope useful for treating viral such as acquired immunodeficiency syndrome, and cancer.

Claim 1; Page 46; 58pp; English

which

```
The present invention describes a composition (I) which comprises at least one human leukocyte antigen (HLA) binding peptide comprising an isolated, prepared epitope comprising one of 547 8-11 residue amino acid sequences (S1), given in AABTS803 to AABT649. (I) has cytostatic, virucide, hepatotropic, antiinflammatory, anti-HIV (human immunodeficiency virus) and protozoacide activities, which can be used in vaccine production and is an inducer of cytotoxic T-cell response. (I) is useful for inducing a cytotoxic T cell response against a preselected antigen in a patient expressing a specific major histocompatibility complex (MHC) class I allele, by contacting cytotoxic T cells (CTLS) from the patient with (I). (I) is useful as a vaccine to treat and/or prevent viral infection and cancer such as prostate cancer, hepatitis B, viral infection and papilloma virus (HPV) infection, cytomegalovirus (CMV), acquired immunodeficiency syndrome (AIDS), renal carcinoma, cervical carcinoma, lymphoma, malaria, and condyloma acuminatum
  The sequences given in AAR77350-53 are peptides derived from the canonical Haemonchus contortus cysteine proteinase molecule which were used in the design of the primers given in AAQ94240-43. These primers were used in the cloning of CDNA fragments from the cysteine protienase gene, such as DM.1, DM.2, DM.3, DM.4, DM.4a and DM.5 (see also AAQ94246-51). The amplified fragments may be expressed in a recombinant cell for the production of antigens. These antigens may be used in the preparation of a vaccine against helminth parasites in a human or non-human animal
                                                                                                                                                                                                                                                        Protective helminth parasite antigen - used in vaccine directed against parasitic nematodes of mammalian gastro-intestinal tract e.g. Haemonchus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Length 8;

AAW60390-432 represent peptides recovered from mouse melaanomas. The peptides are tumour homing peptides, and are identified by in vivo panning comprises administering a library of diverse peptides to a subject having a tumour, collecting a sample of the tumour, identifying a peptide that homes to the tumour, collecting a sample of normal tissue corresponding to the tumour, and determining that the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Tumour homing molecules and their conjugates - useful for, e g. directing linked moiety to tumour containing angiogenic vasculature.

This invention describes novel peptides which home to angiogenic vasculature, specifically of a tumour and which have anti-tumour, anti-inflammatory, anti-angiogenic and anti-arthritta activity. Such molecules are identified by treating a purified Nerceptor with a test compound and identifying compounds that bind specifically to the NGR receptor. The peptides of the invention are inhibitors of angiogenesis and can be used to produce conjugates for delivering agents to angiogenesis or particularly anticancer drugs or an imaging agent, for diagnosis or prognosis. These conjugates may be directed to non-tumour angiogenic vasculature, e.g. that present in inflammatory, regenerating or wounded tissue, e.g. for treatment of macular degenerating, diabetic retinopathy or rheumatoid arthritis. The peptides provide specific targeting to rumours, especially their supporting vasculature, since the NGR receptor is exposed to the circulation only in angiogenic vasculature. Precise targeting should reduce the systemic toxicity of anticancer drugs in the conjugates. Complete killing of all target cells may not be essential since partial denudation of endothelium may result in an occlusive thrombus, and endothelial cells are unlikely to become resistant to anticancer agents nor to lose the targeting receptor. The homing pro-apoptotic conjugates are selectively internalised by the mammalian cell type or tissue and exhibits high toxicity, especially to angiogenic vasculaure. The antimicrobial peptide has low mammalian cell toxicity when not linked to the tumor homing molecule. The conjugates are useful for the treatment of cancer e.g. Raposi's sarcoma, breast and prostate cancer or melanoma. The present sequence is a homing peptide isolated in the present invention, which can be conjugated to an antimicrobial peptide to make the homing pro-apoptotic conjugates of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

comprising the cryptopain protein or its fragments are useful for active immunization of animals and humans against Cryptosporidium infection, or for production of passive immune products in admixture with an adjuvant. Cryptopain can be used for prophylactic, therapeutic, diagnostic and detection purposes. The present sequence represents a peptide fragment of the C. parvum cryptopain protein
                                                                                                                                                                                                                                                                                                                                                                The invention relates to vaccines and cryptopain protein for diagnosis and treatment of Cryptosporidium species infection. Cryptopain protein can be expressed by standard recombinant methodology. The vaccines
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Detecting Cryptosporidium in biological and environmental samples and diagnosis of cryptosporidiosis involves, contacting the sample with Cryptosporidium GP900, P68 or cryptopain antigen, antibody, DNA or RNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Cryptosporidium detection; GP900; P68; cryptopain; cryptosporidiosis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The patent discloses novel chimeric prostate-homing pro-apoptotic peptide which comprises a prostate-homing peptide linked to an antimicrobial peptide, where the chimeric peptide is selectively internalised by and exhibits high toxicity to prostate tissue and where the antimicrobial peptide has low mammalian cell toxicity when not linked to prostate-homing peptide. The chimeric peptide is used to direct an antimicrobial peptide in vivo to a prostate cancer, to induce selective toxicity in vivo in a prostate cancer, and to treat a patient with prostate cancer. The present sequence is a tunour homing peptide from mouse B16B15b melanoma. This sequence is useful in the homing of pro-apoptotic
                                                                                                                                                                      Chimeric prostate-homing pro-apoptotic peptide; prostate-homing peptide; antimicrobial peptide; prostate cancer; tumour homing molecule; mouse;

The present invention relates to a method of detecting Cryptosporidium in biological and environmental samples, and of diagnosing cryptosporidiosis. This involves obtaining a sample and contacting it with Cryptosporidium GP900, P68 or cryptopain antigen, antibody, DNA or RNA, or its variant, mutant or fragment. The method is also useful for detecting and identifying individual Cryptosporidium isolates based on the genetic characteristics, and for diagnosis of prior or concurrent Cryptosporidium infection. The present sequence is a C. parvum peptide sequence used in the exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to an antibody produced against and binding to Cryptosporidium antigen, cryptopain. The invention also provides polynucleotides encoding cryptopain which is a cathepsin L-like cysteine proteinese. The antibody is useful for detecting and treating Cryptosporidium infection, for providing passive immunity or for inhibiting existing Cryptosporidium infection. The present sequence is Cryptosporidium parvum cryptopain active site fragment comprising
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Cryptosporidium infection; antigen; cryptopain;

The invention relates to a cellulase (ADH12819) from the abalone Haliotis discus hannai. The cellulase is present in high levels in the liver considers of the abalone, particularly the anterior portion. The mature cellulase (EC 3.2.1.4) has an N-terminal sequence given in ADH12801, and has a molecular weight of 66 kD, a pH optimum of 5.5-8.0, an optimum of cellulase (EC 3.2.1.4) has an N-terminal sequence given in ADH12801, and the stable at 40 degrees Celsius or below. The invention also encompasses a method for the preparation of the cellulase from abalone internal organs, and further discloses a cDNA sequence (ADH12800) lennoding the cellulase. The abalone cellulase is useful in the de-inking and decolouring processes in paper manufacturing, in detergent compositions, and in the manufacture of foods or animal consistion and in the manufacture of foods or animal conduction and for the production of biomass for energy production and for the production of biomass for energy production and cellulase of the invention is extracted from parts of abalone which are inedible, thousands of tonnes of which are discarded during processing of the shellfish as a foodstuff. The match of the invention permits halps to reduce the environmental impact of this waste, and permits halps to reduce the environmental impact of this waste, and permits halps to reduce the environment of large quantities of callulase. The present sequence represents an N-terminal peptide fragment of abalone cellulase used to design a degenerate PCR primer in an example of the invention.
                                                                                                                                                                                                                                                                                                                                           paper manufacture, detergent, food manfacture, animal fodder,
biomass degradation, energy production, cello-oligosaccharide production,
cellobiose, cellotriose, waste recycling, EC 3.2.1.4.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel cellulase originating in spiral shells capable of degrading cellulose, useful for producing cell oligosaccharide such as cellobiose and a celltriose.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to vaccines and cryptopain protein for diagnosis and treatment of Cryptosporidium species infection. Cryptopain protein can be expressed by standard recombinant methodology. The vaccines comprising the cryptopain protein or its fragments are useful for active immunization of animals and humans against Cryptosporidium infection, or for production of passive immune products in admixture with an adjuvant. Cryptopain can be used for prophylactic, therapeutic, diagnostic and detection purposes. The present sequence represents a conserved motif from P. vinckei cysteine proteinase, used for designing degenerate primers for amplifying DNA fragments of C. parvum cryptopain gene

The invention also provides polynuclectides encoding cryptopain which is a cathepain L-like cysteine proteinase. The antibody is useful for detecting and treating cryptosporidum infection, for providing passive immunity or for inhibiting existing cryptosporidum infection and cryptosporidum sparvum cryptopain fragment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               useful for treating or inhibiting or as vaccine for to provide passive immunity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

Sequence 5. Application US/09867159A

Publication No. US20030104013A1

GENERAL INFORMATION:
TERRASSE, GAETAN LORIA, EMILE TREHIN, YVES

TITLE OF INVENTION: Anti-allergic pharmaceutical composition containing at least one
TITLE OF INVENTION: and at least one anti-histamine compound
TITLE OF INVENTION: Anti-allergic pharmaceutical compound
TITLE OF INVENTION: Anti-allergic pharmaceutical compound
TITLE OF INVENTION: Anti-allergic pharmaceutical compound
TITLE OF INVENTION: Anti-allergic pharmaceutical compound
TITLE OF INVENTION: Anti-allergic pharmaceutical compound
TITLE OF INVENTION NUMBER: US/09/867,159A

CURRENT FILING DATE: 2001-05-29

PRIOR PILING DATE: 2001-03-30

PRIOR PILING DATE: 2001-03-30

PRIOR FILING DATE: 2001-05-03

NUMBER OF SEQ ID NOS: 7

SOFTWARE: PatentIn version 3.1

SEQ ID NO 5

LENGTH: 39
